

# Energy

Our client is a privately held company with core expertise in Carbon Accounting, Energy Management Environmental Consulting & Sustainability. They had a proposal to analyze the carbon accounting business logic and interface the same with the technical specifications.

Our client wanted to promote a product that enables minimum customization to the end user, scalability, robustness and integration with other software's such as ERP.

Organizations are looking to reduce energy costs that hit the bottom line directly & our solution assures proactive budget management & compliance. Our unique alert management system highlights specific & actionable opportunities for energy efficiency.

Our teams of experts can advice you with technologies that drive down energy costs. Our energy management solution can cut your costs quiet significantly.

Based on these kick point Shalom InfoTech developed the Energy Management Software that enables the consumer to track their carbon emission and provide the consumer a hassle free carbon calculator for his/her business with international standards.

It also includes dashboard for the senior management to access, track and evaluate the Carbon footprints for decision making. Most importantly, enabling the consumer to become greener and eco-friendly, an essential CSR.
