## HOSPITALITY IT SOLUTIONS

Increase guest constancy, deliver personalized services, and optimize actions

Our Client, a provider of Hospitality service planned to develop a Dynamic (B2B) Portal as a product.

Basically our client is a tour operator serving B2B clients i.e. travels agencies across the country (India) and abroad in managing their travel and accommodation needs. Thus business scope is hotel accommodation and land transport (Light vehicle) for this purpose the client has tied up with several hotels and transportation providers in managing its needs

Our Client wanted to automate the information management system in providing services for various travel agencies across the country, Provide online information with regard to destinations served by client, provide online booking, quotation, Itinerary to the customers, provide sales and customer data

Shalom InfoTech built a composite Hospitality solution.

Our Back End Operations includes User Management, Inventory management (Hotels), Database management (Customers/travel agency, hotels under contract, transport companies under contract), Rate Management, Dashboard and Analytics

And our Front End operation Quotation management, Sales & Accounts Management, Booking management, Content management

As our solution is an Internet based the intended users are unlimited and Users have no limitations for accessing the application through Internet. As the Intended Customers are from different areas and untrained, our application has been designed in with the easy navigations, attractive colors and understandable Screens.

Shalom
